WHALES & NATURE TRAILS OF QUEBEC

Fall in Wild French Canada: Explore Four National Parks & a Marine Reserve

When you think of Quebec, French fur traders and cosmopolitan Montreal may come to mind. But we've made an enticing discovery you may not be as familiar with: Quebec has some of North America's grandest natural landscapes and rich wildlife habitat! Just beyond Quebec City, mountains, gorges, glacial valleys, dense forests and the St. Lawrence estuary converge. A host of wildlife inhabits these varied ecosystems, from five whale species, porpoises, seals and scores of birds to black bear, gray wolf, red fox and woodland caribou. In fact, UNESCO has granted World Heritage status to the entire region, creating the Charlevoix Biosphere Reserve that encompasses three of the five national parks and reserves we visit. And it's all easily accessible, just north of Maine. Explore it with us on an early autumn adventure as the foliage starts to turn.
